LAB # 3

Lab Session 3: Features of MS Word: Toolbars, Formatting, Saving, and Tables

Objective:

Develop practical skills in using MS Word toolbars and rulers, managing documents through saving options, applying formatting with tools like Format Painter, and creating well-structured content using tables and charts.

Required Equipment / tools:

1. A computer with Microsoft Word installed (any version with tables and chart features).
2. A sample text document and sample numeric data (to be used for tables).

1. Introduction:

In this lab, you will practice essential MS Word features that help in everyday document creation. You will explore toolbars and rulers for better control, learn saving and document management options, apply quick formatting using the Format Painter, and create structured content using tables and charts. These skills are fundamental for producing well-organized, professional documents.

2. Procedure:

Follow the steps given below to complete each task.

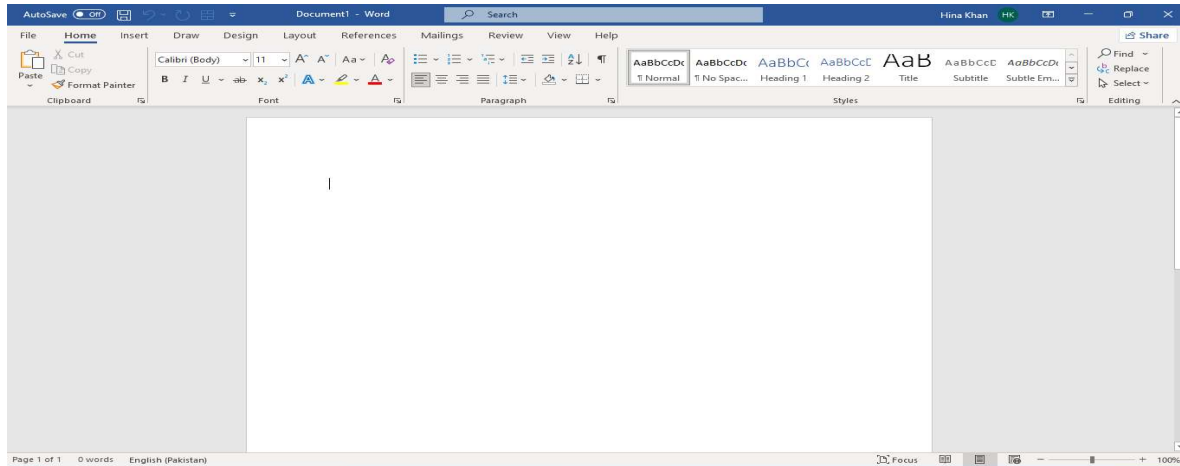

Task 1: Explore different toolbars (Home, Insert, Layout) and rulers; identify commonly used tools.

Task 2: Practice saving files with different names and formats (e.g., .docx, .pdf).

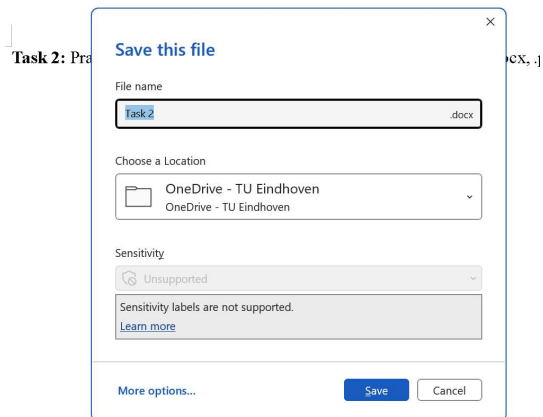

Task 3: Apply text formatting using the Format Painter to copy styles across sections.

Task 4: Create and format a table to organize sample information (e.g., student names and grades).

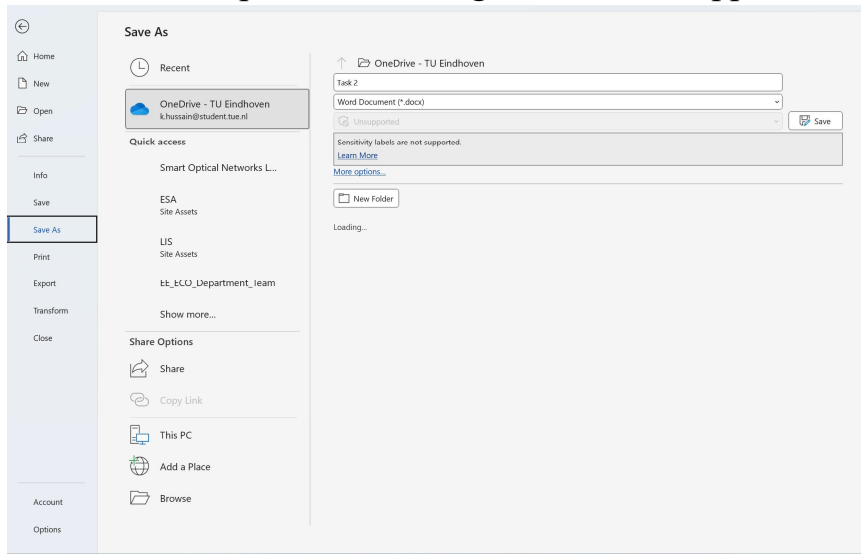

Task 1: Explore different toolbars (Home, Insert, Layout) and rulers; identify commonly used tools.

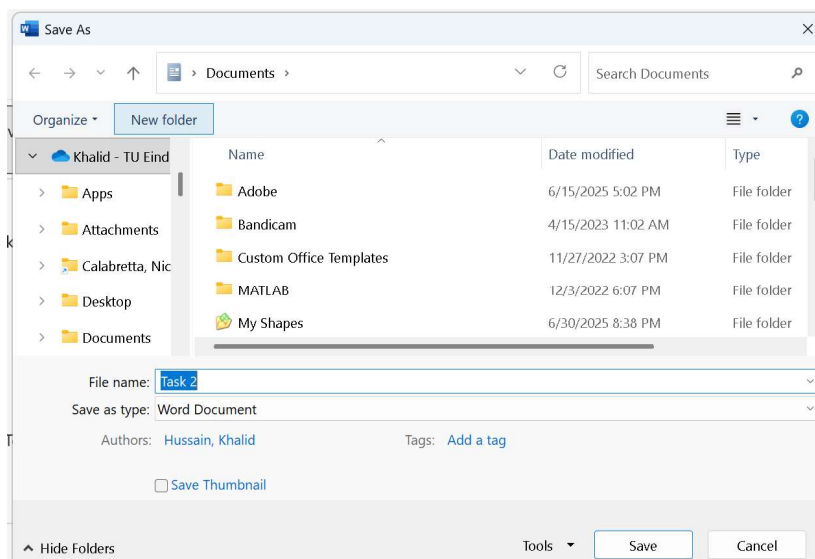

Task 2: Practice saving files with different names and formats (e.g., .docx, .pdf).

Click to more option. Following window will appear:

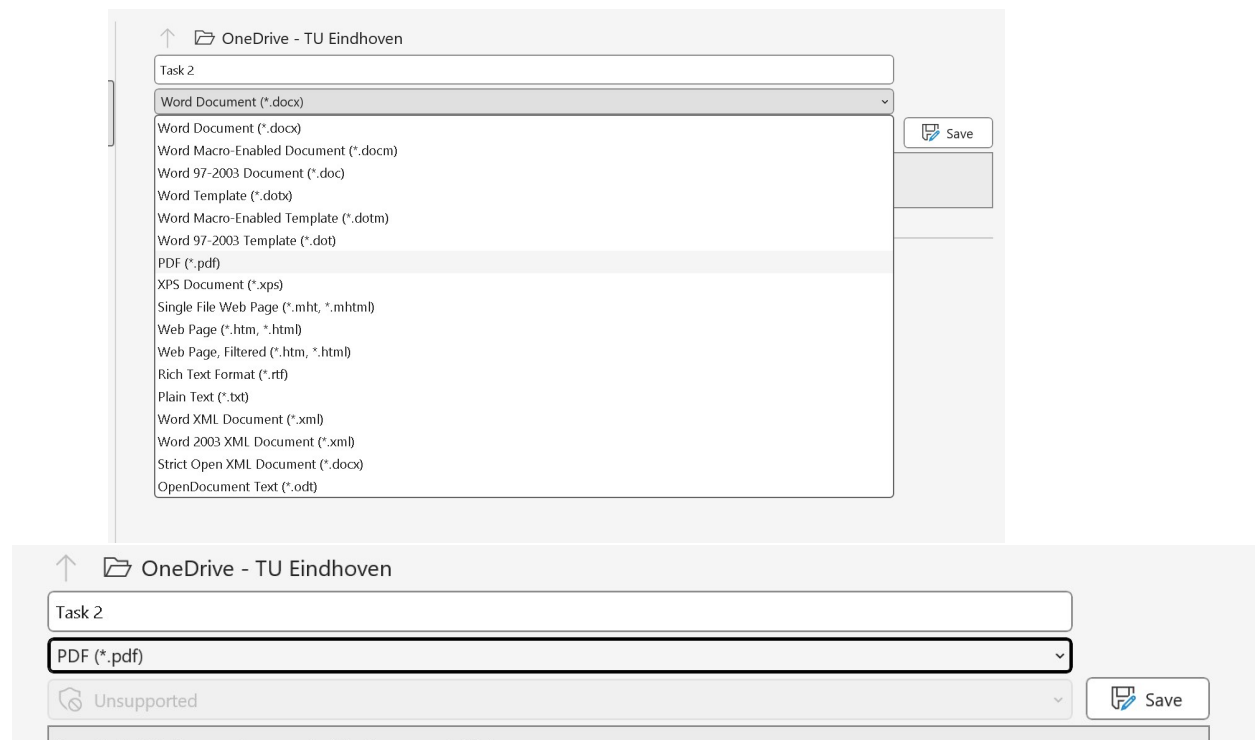

Click Browse

Select your desire folder and click save.

Now save as PDF.

And in your desire folder both files with same appear with different extensions:

	Lab3task_SA	9/1/2025 12:53 PM	Microsoft Word D...	18 KB
	Lab3task_SA	9/1/2025 12:09 PM	Adobe Acrobat D...	62 KB

Task 3: Apply text formatting using the Format Painter to copy styles across sections.

Task 3: Apply text formatting using the Format Painter to copy styles across sections.

A computer with Microsoft Word installed (any version with tables and chart features).

A sample text document and sample numeric data (to be used for tables and charts).

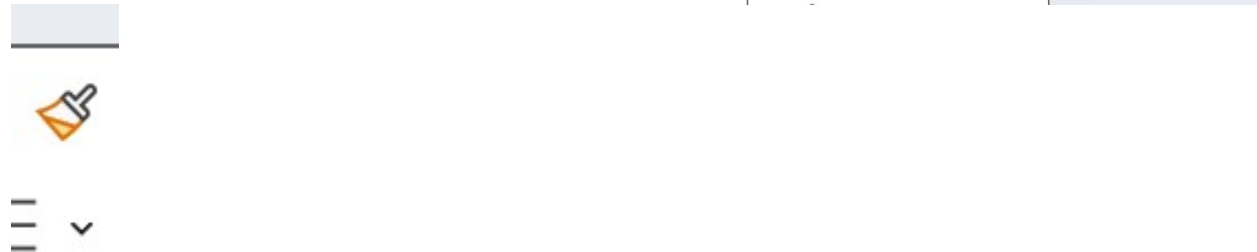

Here we are seeing two sentences one is red font other is black now we apply format painter to make same style of text.

First select red font style and right click on it. Select format painter bursh.

Task 3: Apply text formatting using the Format Painter to copy styles sections.

A computer with Microsoft Word installed (any version with tables and chart features).

A sample text document and sample numeric data (to be used for tables and charts).

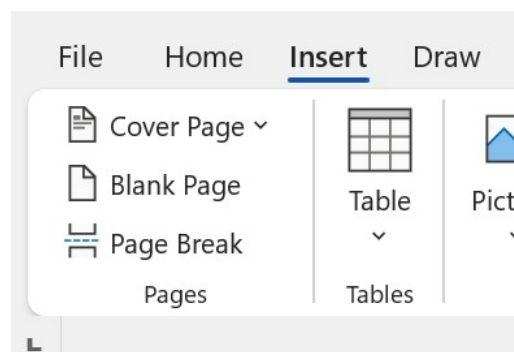

After select it now select black font line and it becomes same as red font line with respect to format.

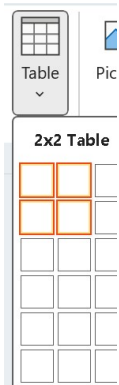

A computer with Microsoft Word installed (any version with tables and chart features).

A sample text document and sample numeric data (to be used for tables and charts).

Task 4: Create and format a table to organize sample information (e.g., student names and grades).

Click insert tab menu. And select table 2 by 2.

Student Names	Grades

3. Observation

--

4. Class Tasks:

1. Create a short document (one page) and explore at least three toolbars (Home, Insert, Layout). Write down the most commonly used commands.
2. Save the same document in two formats: .docx and .pdf. Compare the file sizes and formatting.
3. Use the Format Painter to apply the same font style and color to at least three different paragraphs.
4. Insert a table with at least three columns and four rows. Fill it with sample data (e.g., student names, subjects, marks). Apply borders and shading.

5. Home Tasks:

1. Create a table showing the monthly expenses of your household (at least 5 items) and calculate totals.
2. Insert a simple chart (bar or pie) from sample numeric data and format it with labels and colors.
3. Save the document as both .docx and .pdf, and share screenshots of both versions.

6. Discussion and analysis of results:

7. Conclusion
